# Livingston Lyttle

.Net Developer

---

Implement the knowledge and management of Telematic Engineering, in search of bringing new ideas and good practices to the company, using emerging technologies. Use of the best practices in the development area to improve the equipment or software to be managed.

---

## Experience

### Banco Santa Cruz RD (REMOTE)

#### Senior Software Developer | Aug 2023 – PRESENT

- I am currently developing a project about a contact agenda which consists of consuming an API from the company [Qualtrics](#) and entering said information into our data systems.

**Technologies: C#, .NET CORE, GIT, AZURE DEVOPS, SQL SERVER, DOCKER**

### Banco Santa Cruz RD (DOM. REP)

#### Senior Software Developer | Jul 2022 – Apr 2023

- I created an API (**.NET CORE 6**) which was to provide information to bank customers about their products. The interaction with this application is in production and functional for all bank customers. The app works as follows: by SMS you send a message to 272 with the word balance and if you are a customer you enter your pin and a summary of all the products you have in the bank such as a savings account, loans among others will be detailed.
- I created an API (**.NET CORE 6**) which was to process visa payments through 3d secure which is a security system for online bank card payments that requires you to enter an email or SMS code to authorize the payment. Visa provided us with an example of how to send the request and how the response should be and through that information we made our internal business logic to answer what Visa really needs to complete each of the steps.

**Technologies: C#, .NET CORE, API REST, GIT, AZURE DEVOPS, SQL SERVER, DOCKER**

### Cervecería Nacional Dominicana - INBEV (DOM. REP)

#### Integraton Developer | Mar 2021 – Jul 2022

- I modified an API (**.NET CORE 3.1**) with the different needs that were required. This API was the one that provided the information of the company's products such as beers, soft drinks, among others, and the API carried out the different business logics necessary for the company.
- This information that we consume in the app, which we obtained from a data warehouse, we had to send it to the company's microservice, which was in charge of updating the information in production in the application that customers used to purchase their products (Beers, soft drinks, water).
- When visual changes were required, such as creating a new page or modifying an existing one in the front end (Vue JS), I modified or created new screens according to the requirements provided by our scrum master.

**Technologies: .NET CORE, VUE JS, SQL SERVER, GIT, AZURE DEVOPS, SCRUM**

### **Web Developer (BI) | Mar 2019 – Mar 2021**

- Manage large volumes of data from different countries to consolidate it in a single system.
- Create and automate various ETLs on a daily basis to extract the information, this information was to create visual systems so that the company can better manage its finances and have better control and visualization of what the company is earning and what is not, in order to improve it from sap to SQL SERVER with an application called PENTAHO.
- I created an application (**MVC**) that visually displayed the information extracted from SAP through which you could make modifications and changes before making the closures in case incorrect information is inserted or you want to add something that is manual that is not inserted in the SAP system.
- I created an API (**.NET CORE**) which was to close the company, the role of this API was to insert closing dates or modify them and when the date was set as the closing date arrived, it took all the information that was modified or created a new application (MVC) and updated the data in production.

**Technologies: VUE JS, .NET CORE, Api Rest, SQL SERVER, GIT, AZURE DEVOPS, AGILE SCRUM, HTML, CSS, JS**

### **Banco Progreso Dominicano (DOM. REP)**

#### **Web Developer | Apr 2018 – Mar 2019**

- Implement and restructure the functionalities of the different systems.
- Ensure the quality and speed of the implemented code which is verified through an application.
- Design and create documentation for each requirement implemented in the company.
- I created an application in MVC which helped employees according to a batch of IDS inform which had their correct bank credit and were the best candidates to qualify for new products in the company and provided them with the numbers and information necessary to contact said customers.

**Technologies: MVC, ASP.NET, .NET DESKTOP, SQL SERVER, CRYTAL REPORT, REPORTING SERVICES, JQUERY, AJAX, HTML, CSS, JAVASCRIPT**

### **Techcomm Wireless (DOM. REP)**

#### **Web Developer | Apr 2018 – Mar 2019**

- Manage the website and solve each of the problems that are present.
- Analyze and implement models and flowcharts that establish how code should be written and how applications should be designed.
- In charge of the development and maintenance of new technologies, developing updates in the systems that make up the company.

**Technologies: ASP.NET, SQL SERVER, REPORTING SERVICES, HTML, CSS, JAVASCRIPT**

## EDUCATION

### VUE JS ESSENTIAL

*Linkedin Learning* | 2021 - 2021

### Bootstrap 3 Essential

*Linkedin Learning* | 2020 - 2020

### Learnig Azure

*Linkedin Learning* | 2020 - 2020

### SQL Server: Triggers, Proc. And Funtions

*Linkedin Learning* | 2020 - 2020

### Power BI Advanced

*Linkedin Learning* | 2020 - 2020

### Asp. Net MVC 5 Essential

*Linkedin Learning* | 2018 - 2018

### Microsoft Office Specialist

*Microsoft* | 2018 - 2018

### Owasp Top Ten 2017

*Universidad tecnológica Nacional* | 2018 - 2018

### Information System Engineering

*Universidad tecnológica Nacional* | 2014 - 2018

### Diploma In Website Design CMS

*Instituto tecnológico de las Americas (ITLA)* | 2017 - 2017

### English By Immersion

*Ministerio de Educacion Superior, Ciencia y tecnológica (MECYST)* | 2016 - 2016

---

## Skills

Knowledge of **dependency injections** in **.NET Core**

Ability to create **Unit Testing** in **.NET CORE**

Knowledge of **Api Rest** in **.NET Core**

Knowledge of security (**Cors, Authentication, Authoritation**) in **.NET Core**

Knowledge of **SQL - No SQL** Databases

Use of **Git** version control system

Willingness and ability to quickly learn new technologies

servers and applications management

Knowledge of **Scrum** Agile development methodologies

---

## Languages

Spanish: Native

English: Profesional
